Lab 1: HTML or Hypertext markup Language

In this lab we will learn about HTML and how does HTML works. We will cover some of the lessons in HTML language and learn how HTML documents are displayed.

A step-by-step guide on how to edit and run html documents.

1. Open any text editor (preferably notepad++ but any other will work
2. Copy and paste the code into the file as shown in the below box

```
<!DOCTYPE html>
<html>
<head>
<title>Page Title</title>
</head>
<body>

<h1>This is a Heading</h1>
<p>This is a paragraph.</p>

</body>
</html>
```

3. Go to file menu and click save as: When renaming the document make sure to select the filename as follows: “FILENAME.html”. Make sure to include the double quotes. The FILENAME can be any name however the extension (html) needs to be present.
4. Now to go to folder where the file is saved and double click on it. It should show a properly formatted web page.

Task 1: go to the following page: https://www.w3schools.com/html/ and finish the following lessons today. Do not use the browser-based code execution. Write the code from lessons to your own txt file and run it to see how it works. In the end, you will be able to write styled HTML documents. When doing this lesson save each lesson as a separate html file with a prefix as 1_, 2_, 3_ and so on. Practice the following lesson today.
Start from HTML home till HTML Block and Inline and save all the lessons into separate HTML documents.
